

GTI TERMINALS

SISTEMA TR^{ESS}Revolution[®]
on the cloud

The GTI Terminals for attendance control are specifically designed to have instant and online communication with Sistema TRESS or Revolution through LAN/WAN/Internet using our TRESS Enlínea module.

The GTI Terminals provide high flexibility in the design of the attendance control solution. They are available with different identification technologies such as biometric with fingerprint, proximity and barcode cards, and facial recognition.

- ✓ Online communication with Sistema TRESS or Revolution using our TRESS Enlínea module
- ✓ Equipment that uses updated security certificates and protocols to protect the information
- ✓ Service and support from Grupo Tress Internacional
- ✓ Maximize the use of the Supervisors module in Sistema TRESS
- ✓ Optimizes the use of the My Team and Cafeteria modules in Revolution
- ✓ Multiple and fast identification methods
- ✓ Protective metallic base included

STANDARD MODELS

Biometric + Barcode + PoE (Power over Ethernet)
Biometric + HID Proximity + PoE (Power over Ethernet)
Biometric + Mifare Proximity + PoE (Power over Ethernet)
Facial recognition

UPS RECOMMENDATIONS

Grupo Tress Internacional recommends the use of an uninterruptible power supply (UPS) for each terminal to prevent any voltage variations.

WARNING: The GTI Terminals should not be powered using the PoE and the power adapter at the same time. Doing this could damage the equipment and loss of all warranties.
