Product Release

The way organizations manage their workforce continues to evolve, and so do the tools that support them.

The 2026 Product Release brings together our latest features to help HR and Payroll teams automate critical processes, streamline daily operations, strengthen compliance, and improve the employee experience.

Explore the latest enhancements across Sistema TRESS, Revolution on the cloud, and +ORDEN, all designed to help your organization operate with greater efficiency, visibility, and confidence.

Intek GTI Terminal

Built for today's workforce

Modern operations require technology that's reliable, secure, and ready for any work environment.

The new Intek GTI Terminal combines multiple authentication methods with a rugged industrial design and remote management capabilities, giving a faster, more secure way to manage attendance while reducing administrative effort.

Offering a more connected and flexible experience, this new generation of terminals integrates various forms of identification and remote management capabilities that facilitate operational continuity and reduce the workload on technical teams.

Key capabilities

- Facial recognition, fingerprint, barcode, and proximity card authentication in a single device
- Rugged metal housing built for demanding industrial environments and extreme temperatures
- Faster and more accurate facial recognition
- Anti-spoofing technology to help prevent buddy punching and fraudulent clock-ins
- Compatible with other GTI terminals and additional modules
- Remote software updates without on-site intervention
- Reduced IT workload across remote locations
- Improved operational continuity with minimal maintenance

End-to-End Payroll

Bring every step of payroll together in one connected process

Payroll disbursement is one of the most critical processes within any organization. Yet many companies still rely on spreadsheets, email threads, shared folders, and disconnected approval processes, creating unnecessary uncertainty at one of the most critical stages of the payroll cycle.

Traditionally, pre-payroll has been reviewed across multiple tools, validations have depended on manual follow-ups, and payroll disbursement has required coordinating multiple steps with limited visibility. The result is rework, version-control issues, and little insight into the overall progress of the process.

This streamlined process connects pre-payroll, validations, approvals, and payroll disbursement within a single, fully traceable workflow. HR, Payroll, and Finance teams gain complete visibility into every stage, making it easy to see what's been validated, who approved each step, and what still requires action before payroll is finalized and payments are released.

Key capabilities

- Standardize pre-payroll reviews with configurable checklists and review dashboards
- Centralize payroll validations, approvals, and responsibilities in one connected workflow
- Compare payroll versions to identify discrepancies before final approval
- Manage payroll disbursement with greater control, payment confirmation, and a complete audit trail
- Reduce spreadsheet dependency and eliminate disconnected processes
- Minimize errors caused by outdated payroll versions or fragmented information
- Gain end-to-end visibility across the entire payroll process
- Strengthen internal controls and audit readiness

Remote Attendance

The workplace is everywhere

Today's workforce isn't tied to a single location.

Employees work from home, customer sites, branch offices, manufacturing plants, and in the field. As work becomes more distributed, HR teams need reliable attendance data without sacrificing visibility or compliance.

+ORDEN Remote Attendance allows employees to securely clock in and out from approved locations while providing HR with real-time workforce visibility and accurate attendance records that flow directly into pre-payroll processing.

No additional infrastructure. No disconnected systems. Just a smarter way to manage a distributed workforce.

With Remote Attendance, you can:

- Capture attendance from approved work locations
- Improve visibility across remote and field employees
- Synchronize attendance with pre-payroll in real time
- Reduce payroll discrepancies caused by manual processes
- Strengthen audit readiness with complete attendance traceability
- Simplify workforce management without additional hardware

Attendance

Medical Leave Management

Get medical leave documentation before payroll is finalized

Late medical leave documentation often results in payroll adjustments, manual rework, compliance risks, and employee dissatisfaction.

With Medical Leave Management, employees submit supporting documentation directly through +ORDEN, allowing HR teams to review, validate, and process medical leaves before payroll is finalized.

Instead of chasing paperwork, HR teams can focus on reviewing accurate information and keeping payroll on schedule.

Key features

- Receive medical leave documentation sooner
- Reduce manual data entry through automated document capture
- Minimize payroll corrections and off-cycle adjustments
- Improve accuracy for IMSS variable payroll calculations
- Reduce compliance risks related to medical leave reporting
- Deliver a better employee experience by preventing payroll discrepancies

At Grupo Tress Internacional, we build technology solutions that simplify complex HR and Payroll processes, giving organizations the confidence to work smarter and keep moving forward.
